8. Reference Circuit

This is a notification for circuit combinations and please refer below caution for specification, and carefully in detail description as applies to adapt on peripherals circuits.

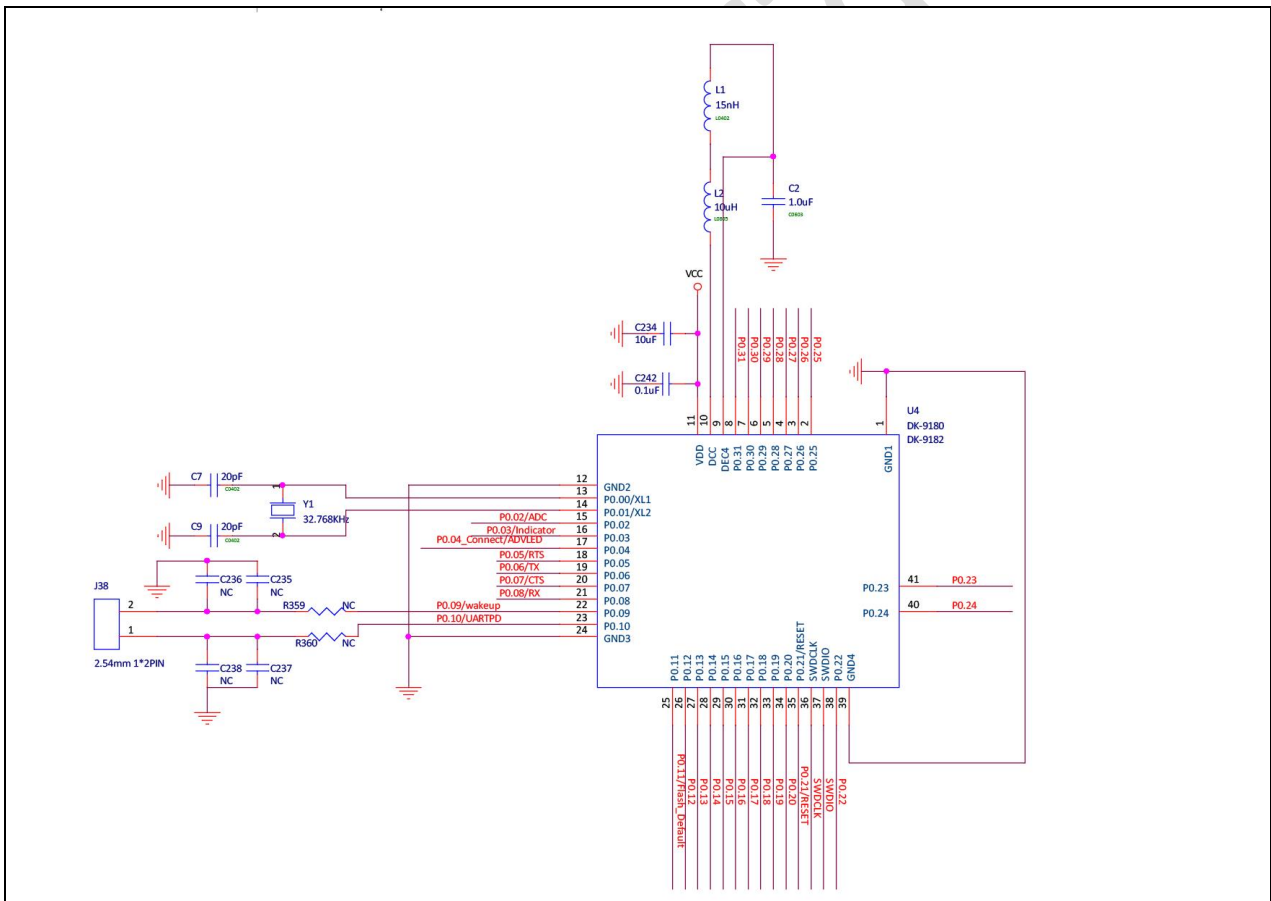

The module default is define on “LDO mode” and must add external 32.768 kHz crystal for MCU boot up.

Pin DEC4 had built in 1 μ F decoupling capacitor in module.

Please remove Y1/C7/C9 when using the internal 32MHz RC oscillator.

When disable NFC function, please removal NFC Radio Frequency Coil and C235/C236/C237/C238 capacitor.

Please add L1/L2/C2 in circuit if power setup “DC-DC” mode.

9. Notes and Cautions

1. Follow the conditions written in this specification, especially the control signals of this module.
2. The supply voltage should abide by the maximum ratings and must to supply within range of specification.
4. This module should not be mechanically stressed when installed.
5. Keep this module away from heat. Heat is the major cause of decreasing the life time of these modules.
6. Avoid assembly and use of the target equipment in conditions where the module temperature may exceed the maximum tolerance.
7. Keep this module away from other high frequency circuits.
8. Refer to the recommended pattern when designing a board.
9. Do not expose modules under direct sunlight for long duration. Modules should be kept away from humid and salty air conditions, and any corrosive gasses or substances. Store it within -40°C to $+125^{\circ}\text{C}$ before and after installation.
